1 Introduction to MekaERP

MekaERP is a modern, web-based retail management system designed to help small and medium-sized retail businesses run smoothly. It brings together everything you need to manage your shop in one place — from selling products at the counter, to tracking your stock levels, managing customers, recording expenses, and generating reports for tax and accounting.

What you can do with MekaERP:

- Sell products quickly using the built-in Point of Sale (POS) terminal
- Track your stock and get alerts when items are running low
- Manage both retail and wholesale customers with different pricing
- Record and categorize business expenses
- Generate tax summaries and inventory audit reports
- Print receipts for retail sales and professional invoices for wholesale orders
- Manage your team — add staff members with different access levels
- Access the system from any device — phone, tablet, or computer

Tip

MekaERP works entirely in your web browser — there is nothing to install. Just open the link and log in from any device connected to the internet.

How this manual is organized:

This guide walks through every section of MekaERP in plain language. Each chapter covers one part of the system with step-by-step instructions, tips, and explanations. You do not need any technical background to follow along.

2 Getting Started — Logging In

Every time you open MekaERP you will see the Login page first. This is by design — the system always asks you to confirm your identity before letting you in, even if you used it recently on the same device.

How to log in:

1. Open your web browser (Chrome, Safari, Firefox, Edge — any will work)
2. Go to: **wholesale-rp.vercel.app**
3. You will see the MekaERP login screen with two fields
4. Type your **Email Address** in the first box
5. Type your **Password** in the second box
6. Click the blue **"Login"** button
7. The system will check your details and take you to the right page for your role

Where you land after login:

Your Role	Where you are taken
Owner or Manager	The main Dashboard (Overview page with sales charts and stats)
Cashier	The POS Terminal (ready to start selling immediately)
Wholesale Customer	The Wholesale ordering page

Note If you see "Invalid email or password", double-check that Caps Lock is not on. Contact the business Owner to reset your password if you are locked out.

Logging out:

To log out, click your name or the user icon in the top-right corner of the screen and select "Sign Out". You will be returned to the login page. The system also logs you out automatically after 15 minutes of no activity — see Section 15 for details.

3 User Roles Explained

MekaERP has four types of users. Each type (called a "role") controls what a person can see and do inside the system. Your role is assigned by the business Owner when your account is created.

Role	What they can do
OWNER	Full access to everything. Can manage staff, view all reports, change system settings, and see the complete financial picture of the business.
MANAGER	Can access the Dashboard, manage inventory, customers, suppliers, expenses, and reports. Cannot change business settings or manage other staff accounts.
CASHIER	Goes directly to the POS Terminal. Can process sales, add new customers, print receipts. Cannot see reports, inventory management, or financial data.
WHOLESALE CUSTOMER	An external buyer account. Can only see the Wholesale ordering page where they can browse products at wholesale prices and place orders.

Tip

Only the Owner can create and manage staff accounts. See [Section 12 — Staff Management](#).

4 The Dashboard (Overview Page)

The Dashboard is the home page for Owners and Managers. It gives you a live snapshot of how your business is performing today compared to yesterday and last week.

What you see on the Dashboard:

Card / Chart	What it tells you
Today's Sales Count	How many sales transactions were completed today
Today's Revenue	Total money collected from sales today (in Naira)
This Week's Revenue	Total revenue for the current week with a percentage change vs last week
This Month's Revenue	Total revenue for the current month
Low Stock Alert	Number of products running below their minimum stock level
Sales Trend Chart	A bar chart showing daily revenue for the past 7 days
Category Distribution	A pie chart showing which product categories are selling the most

Reading the trend arrows:

Each stat card shows an arrow and a percentage. A green upward arrow means this figure is better than the same period before. A red downward arrow means it has dropped. For example, "+12.5%" next to Today's Revenue means you have sold 12.5% more today than yesterday.

Navigation sidebar:

On the left side of the screen is the navigation menu (sidebar). Click any item to go to that section. On a mobile phone, tap the three-line menu icon at the top to open the sidebar.

Tip

The "Open POS Terminal" button at the top of the sidebar takes you directly to the sales screen — useful at the start of each shift.

5 POS Terminal — Making a Sale

The POS (Point of Sale) Terminal is where you ring up customers and process payments. It is designed to be fast and simple to use at the counter.

The screen is split into two parts:

- **Left side** — Product catalog: all available products displayed as cards
- **Right side** — Cart: the items you have added for the current sale

Step-by-step: Processing a sale

- 1. Select the customer** — Use the dropdown at the top of the cart panel. Choose the customer's name from the list. If it is a new customer, click the + button to add them quickly.
- 2. Find products** — Type a product name or SKU code in the search box, or click a category filter button to narrow down the list. You can also scan a barcode directly into the search box using a barcode scanner.
- 3. Add items to cart** — Click a product card to add it to the cart. Click it again to add more units. If a product shows "Out" it cannot be added.
- 4. Adjust quantities** — In the cart, use the + and - buttons next to each item to change the quantity. Click "Remove" to take an item off.
- 5. Choose payment method** — Select from Cash, Card/POS, Bank Transfer, Mobile Money, or Split Payment using the dropdown below the cart.
- 6. Click "Finalize Transaction"** — A confirmation popup will appear showing the total amount, customer name, and payment method.
- 7. Confirm payment** — Click "Confirm Payment" to complete the sale. The stock levels update automatically.
- 8. Print receipt or invoice** — After a successful sale, a green bar appears at the top with options to Print Receipt (retail) or Generate Invoice (wholesale).

Retail vs. Wholesale Mode

At the bottom of the cart panel you will see two buttons: **Retail Mode** and **Wholesale Mode**. Selecting Wholesale Mode switches all product prices to the wholesale (bulk discount) prices. This switches automatically when you select a Wholesale Customer.

Understanding VAT (Tax)

Badge shown in cart	Meaning
No VAT badge	This item is tax-exempt — no VAT is added (e.g. basic food items, medicine)
+TAX badge	VAT of 7.5% is added on top of the price shown — the total will be higher
IN PRICE badge	VAT is already included inside the price shown — no extra charge is added

Split Payment

If a customer wants to pay with a combination of cash and card (or any mix), select "Split Payment" from the payment dropdown. Fields will appear for you to enter how much is being paid by each method. The total must match the sale amount before you can confirm.

Receipts and Invoices

Button	What it produces
Print Receipt	Opens a thermal printer-formatted receipt (80mm). Ideal for retail customers at the counter. Shows
Generate Invoice	Creates and downloads a professional PDF invoice (A4). Used for wholesale customers. Includes

Tip

On a mobile phone, tap the floating "Cart" button at the bottom of the screen to open the cart panel. Tap the back arrow in the cart header to return to the product grid.

6 Inventory Management

The Inventory page is where you manage all the products your shop sells. You can add new products, update their details, adjust stock levels, and monitor which items are running low.

Adding a new product:

1. Go to Dashboard > Inventory
2. Click the **"Add Product"** button in the top-right
3. Fill in the product details (see table below)
4. Configure the tax setting for this product
5. Click **"Save Product"**

Field	What to enter
Product Name	The full name of the product as it will appear on receipts and invoices
SKU Code	A short unique code you give the product (e.g. "RICE-5KG"). Used for barcode scanning.
Barcode	Optional. The barcode number printed on the product packaging.
Category	Which category this product belongs to (you create categories separately)
Supplier	Who supplies this product (you add suppliers separately)
Retail Price	The price charged to regular (retail) customers
Wholesale Price	The discounted price charged to wholesale buyers
Stock Quantity	How many units you currently have in stock
Low Stock Threshold	When stock falls below this number, you get an alert
Unit	How the product is measured — pcs, kg, litres, boxes, etc.
Min. Order Qty	Minimum number a wholesale customer must order at once
Tax Setting	Choose: Tax Exempt, Tax Exclusive (7.5% added on top), or Tax Inclusive (VAT already in price)

Editing a product:

Find the product in the table, click the edit (pencil) icon on its row, make your changes, and click Save. You can update any field including the price and stock quantity.

Restocking / Receiving stock:

When new stock arrives, find the product and click the restock button. Enter the quantity received and save. The system adds this to the existing stock count automatically.

Low stock alerts:

Products whose stock quantity falls below their Low Stock Threshold are flagged in the inventory table with a warning badge. The Dashboard also shows a count of low-stock items. The system can also send automatic email alerts to the owner — this is configured in Settings.

Note

Deleting a product is permanent. If a product is discontinued, consider setting its stock to 0 and leaving it in the system so old sales records remain accurate.

7 Categories

Categories help you organise your products into groups, making them easier to find on the POS screen and in reports. For example: "Beverages", "Cleaning Products", "Grains & Staples".

Managing categories:

1. Go to Dashboard > Categories
2. Click **"Add Category"** and type a name
3. Optionally assign a parent category to create sub-categories (e.g. "Soft Drinks" under "Beverages")
4. Click Save

Tip

Categories appear as filter buttons on the POS Terminal, making it quicker for cashiers to find products during a busy sale.

8 Customers

The Customers page lets you manage a list of your buyers — both regular (retail) customers and wholesale buyers. Having customer records allows you to track each customer's purchase history and manage credit accounts.

Adding a customer:

1. Go to Dashboard > Customers
2. Click "Add Customer"
3. Enter the customer's name, phone number, email, and type (Retail or Wholesale)
4. For Wholesale customers, optionally set a **Credit Limit** — the maximum amount they can owe the business at any time
5. Click Save

Customer types:

Type	Description
RETAIL	Regular walk-in customers. Charged at standard retail prices.
WHOLESALE	Bulk buyers with an account. Charged at wholesale (discounted) prices. May have a credit limit as

Credit limit:

A credit limit defines how much a wholesale customer is allowed to owe your business. The Customers page shows a progress bar for each wholesale customer indicating how much of their credit they have used. This helps you decide when to follow up on payments.

Tip

You can also add a customer quickly from the POS Terminal during a sale by clicking the + button next to the customer dropdown.

9 Suppliers

Suppliers are the companies or individuals who supply products to your shop. Every product in your inventory must be linked to a supplier. Keeping supplier records helps you know who to contact when you need to reorder stock.

Adding a supplier:

1. Go to Dashboard > Suppliers
2. Click **"Add Supplier"**
3. Enter the supplier name, contact person, phone number, email, and address
4. Click Save

Once a supplier is saved, they appear in the dropdown when you add or edit products in Inventory.

10 Expenses

The Expenses section lets you record money going out of the business — things like rent, electricity bills, staff salaries, delivery costs, and so on. Tracking expenses alongside sales gives you a true picture of your profit.

Recording an expense:

1. Go to Dashboard > Expenses
2. Click **"Add Expense"**
3. Choose a category (e.g. Rent, Utilities, Salary, Transport, Miscellaneous)
4. Enter the amount in Naira
5. Write a short description so you remember what it was for
6. Set the date the expense was paid
7. Click Save

Editing or deleting an expense:

Find the expense in the list and click the edit icon to correct it, or the delete icon to remove it. Use the date filter to view expenses from a specific period.

Note

Expenses are linked to the user who recorded them. Owners can see all expenses from all staff. Managers can only see their own recorded expenses.

11 Reports

The Reports page lets you generate and download detailed financial and inventory documents. These are useful for tax filing, business reviews, stock audits, and accounting.

Report Type	What it contains
End-of-Day (EOD) Report (Email)	Sends a summary of today's sales directly to the owner's email address. Includes total revenue, number of transactions, and more.
Monthly Tax Summary (PDF Download)	Downloads a PDF showing all sales for the current month with tax collected on each transaction. Includes a summary of total tax collected.
Inventory Audit (PDF Download)	Downloads a PDF listing all products with their current system stock quantities. Includes columns for product name, quantity, and unit price.

Sending the End-of-Day report:

1. Make sure the owner's email is entered in Settings > Business Info
2. Go to Dashboard > Reports
3. Click **"Send End-of-Day Report"**
4. The system will email the report within a few seconds

Tip

The EOD report can also be set to send automatically at a scheduled time every day. Configure this in Settings > EOD Report Time.

12 Staff Management

The Staff page is only available to the Owner. It allows you to create accounts for your employees so they can log in to MekaERP with their own username and password.

Adding a new staff member:

1. Go to Dashboard > Staff (Owner only)
2. Click **"Add Staff Member"**
3. Enter the staff member's full name and email address
4. Create a password for them (they should change it after first login)
5. Choose their role: Manager or Cashier
6. Optionally assign them to a specific branch
7. Click Save

What each role can access (quick reference):

Section	Who can access it
Dashboard Overview	Owner, Manager
Sales History	Owner, Manager
Inventory	Owner, Manager
Categories	Owner, Manager
Customers	Owner, Manager
Suppliers	Owner, Manager
Expenses	Owner, Manager
Reports	Owner, Manager
Staff Management	Owner only
Settings	Owner only
POS Terminal	Owner, Manager, Cashier
Wholesale Page	Wholesale Customer only

Note Keep passwords safe and confidential. If a staff member leaves, delete or deactivate their account immediately to protect business data.

13 Settings

Settings is available to the Owner only. This is where you configure core information about your business — these details appear on receipts, invoices, and reports.

Business Information settings:

Setting	What it does
Business Name	Your shop or company name — printed at the top of every receipt and invoice
Business Address	Your physical shop address — printed on receipts, invoices, and report footers
Business Phone	Contact number for your business — shown on receipts
Owner Email	The email address that receives End-of-Day reports and low-stock alerts
Tax Rate	Default VAT rate (currently 7.5% for Nigeria). Per-product overrides exist in Inventory.
Currency	Set to NGN (Nigerian Naira) by default
EOD Report Time	The time each day when the End-of-Day report is automatically emailed (e.g. 21:00 for 9pm)
Receipt Footer	Custom message at the bottom of every receipt (e.g. "Thank you for shopping with us!")

Changing your password:

1. In Settings, click the **"Change Password"** tab
2. Enter your current (old) password
3. Enter your new password
4. Re-enter the new password to confirm
5. Click **"Update Password"**

Tip Set a strong receipt footer message — for example your returns policy or a loyalty programme reminder. It prints on every receipt automatically.

14 Wholesale Module

The Wholesale page is a dedicated portal for your wholesale buyers. A customer with the "WHOLESALE_CUSTOMER" role logs in and lands directly here, where they can browse products at wholesale prices and place orders.

For the business owner / manager:

- Wholesale customers are created in the Customers page with type set to "Wholesale"
- A login account (email + password) is created for them in Staff Management with the "WHOLESALE_CUSTOMER" role
- Each wholesale customer can have a credit limit — set in the Customers page
- You can process wholesale sales from the POS Terminal by selecting "Wholesale Mode" and choosing the wholesale customer — this gives them the wholesale pricing

For the wholesale customer:

- Login at wholesale-rp.vercel.app with the email and password provided to you
- Browse available products and their wholesale prices
- Sales processed for your account appear with professional PDF invoices

Wholesale pricing vs. retail pricing:

Every product has two prices in the system: a Retail Price (charged to regular walk-in customers) and a Wholesale Price (a lower price charged to bulk buyers). The system automatically uses the correct price based on the customer type selected during a sale.

15 Security — Idle Auto-Logout

MekaERP takes security seriously, especially for shared computers at the counter. Two key security features protect your business data:

Feature 1 — Always show login on site open:

Every time someone opens the MekaERP website address, they will see the login page — even if they were logged in before on that device. This ensures that nobody can access the system just by opening the browser link.

Feature 2 — Automatic logout after 15 minutes of inactivity:

If a logged-in user stops using the system (no mouse movement, no typing, no clicks) for 13 minutes, a warning message appears on screen with a countdown timer.

Event	What happens
13 minutes idle	A popup appears saying "Session Expiring" with a 2-minute countdown clock
14 minutes idle	The countdown shows 1:00 remaining. The screen is blocked until the user responds.
15 minutes idle	The system automatically logs the user out and redirects to the login page
"Stay Logged In"	Clicking this button resets the timer back to 15 minutes — no data is lost
"Logout Now"	Clicking this logs out immediately without waiting for the timer

Note If the system logs you out in the middle of a sale, no data is lost — items in the cart are cleared, but no transaction is recorded unless you clicked "Confirm Payment". Simply log back in and start the sale again.

16 Frequently Asked Questions

Q: I forgot my password. What do I do?

A: Contact the business Owner. They can reset your password from the Staff Management page. There is no self-service password reset by email at this time.

Q: A product is showing as "Out of Stock" but we have it in the warehouse. What do I do?

A: Go to Dashboard > Inventory, find the product, and click the restock button. Enter the quantity to add and save. The product will be available on the POS immediately.

Q: I made a mistake on a sale — how do I reverse it?

A: Go to Dashboard > Sales, find the transaction, and change its status to "Voided". This marks it as cancelled in the records. Contact the Owner if you do not have permission to void sales.

Q: The receipt printed blank or cut off in the wrong place.

A: Make sure your thermal printer is set to 80mm paper width. In the printer settings, check that the paper size matches and the driver is installed correctly. The receipt is formatted for standard 80mm thermal rolls.

Q: Why do some products show a VAT badge and others do not?

A: Each product has its own tax setting configured in Inventory. Products marked "Tax Exempt" do not attract VAT. Products marked "+Tax" have 7.5% added on top at checkout. Products marked "Incl. VAT" already include the tax within the displayed price.

Q: Can multiple people use the system at the same time?

A: Yes. MekaERP is a web-based system and multiple users can be logged in simultaneously from different devices. Each user's activity is tracked separately.

Q: The system is slow or not loading. What should I check?

A: Check your internet connection first. MekaERP requires an active internet connection to work. Try refreshing the page (press F5 or Ctrl+R). If the problem continues, try a different browser or clear your browser's cache.

Q: How do I run MekaERP on a mobile phone?

A: Open your phone's browser and go to the website address. MekaERP is fully responsive and works on phones and tablets. On the POS Terminal, tap the Cart button at the bottom of the screen to view and manage the cart.

Q: Where are my reports saved?

A: PDF reports (Tax Summary, Inventory Audit) are downloaded directly to your device's Downloads folder. End-of-Day reports are sent to the owner's email address set in Settings.

Q: Can I change the tax rate?

A: The default VAT rate is 7.5% (standard Nigerian VAT). Owners can adjust this in Settings. Individual products can also be set to Exempt or Tax-Inclusive in the Inventory page.

Quick Reference Card

Common Tasks at a Glance

Task	How to do it
Make a sale	POS Terminal > Add items > Select customer > Choose payment > Finalize
Add new product	Inventory > Add Product > Fill fields > Save
Restock an item	Inventory > Find product > Restock button > Enter qty > Save
Add a new customer	Customers > Add Customer OR POS > + button next to customer dropdown
Record an expense	Expenses > Add Expense > Category + Amount + Date > Save
Send daily report	Reports > Send End-of-Day Report
Download tax PDF	Reports > Download Tax Summary PDF
Add staff member	Staff > Add Staff Member > Name, Email, Role > Save (Owner only)
Change business name	Settings > Business Info > Update name > Save (Owner only)
Change your password	Settings > Change Password tab > Old + New + Confirm > Update
Print retail receipt	After sale > Click "Print Receipt" in green notification bar
Generate invoice (PDF)	After sale (wholesale) > Click "Generate Invoice" in green notification bar
Log out	Click your name/avatar top-right > Sign Out

Important Notes

- The system requires an active internet connection at all times
- You will be logged out after 15 minutes of no activity — this is a security feature
- Always confirm payment before leaving the POS screen — carts are cleared on logout
- Only the Owner can access Settings and Staff Management
- Receipts print on 80mm thermal paper; invoices are standard A4 PDF documents

For technical support or training, contact the system administrator. Platform: wholesale-rp.vercel.app
